

# Case Study

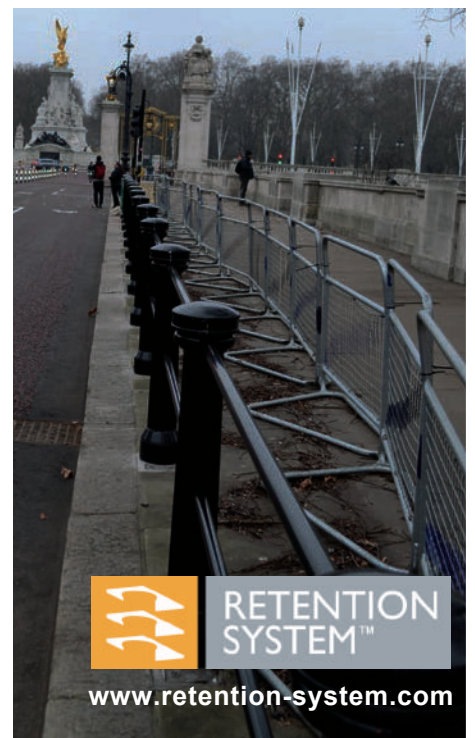

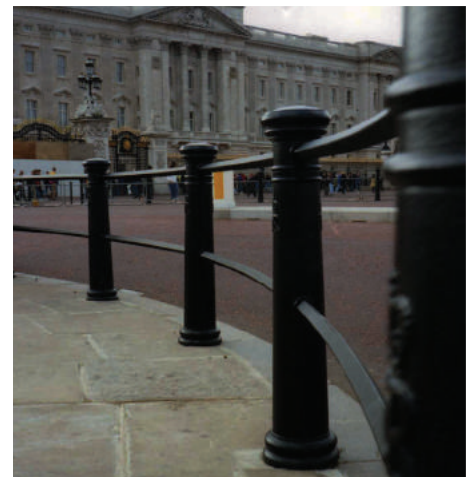

## RS115 | The Mall

**Project:** Railing, The Mall, Westminster, London, England  
**Product:** RS115 sockets

### RS115 | The Mall...

In Westminster, The Mall is central to many ceremonial processions, state visits by foreign dignitaries and used as the classic finish for sporting events such as the London Marathon. During such occasions, the road is transformed from its daily traffic use and sees huge crowds line the route from Buckingham Palace to Admiralty Arch. IPL group's RETENTION SYSTEM™ socket foundations have been specified by Transport for London to help manage infrastructure installation, removal and maintenance requirements. Street furniture, bollards and traffic signals in RS sockets can be removed and replaced as required without the expense and disruption of repeat excavation. Recently the refurbished railing along The Mall has also been reinstated in RS115 sockets carrying the TfL logo.

Further information on the RETENTION SYSTEM sockets for post installation is available at [www.retention-system.com](http://www.retention-system.com)
